

提要 4：如何建立數學模式？(三)

再舉一混合溶液之濃度變化問題說明如何建立數學模式(請參考綠色框線內之說明)。

Notice:

- 控制方程式 $\frac{dy}{dt} = 10 - 0.05y$ 實際上乃是質量守恆定律的化身。

習題

1. A tank contains 3 m^3 of pure water initially. Solution with the concentration of 1 mole/m^3 flows into the tank in the flow rate of $1 \text{ m}^3/\text{min}$ and mixes uniformly with the contents. An equal volume of which is forced out of the tank. Calculate the time required when the concentration in the tank is 0.5 mole/m^3 . 【94 中原化工所 10%】
2. 一水槽中裝有含 160 公克鹽量之水溶液共 1,000 立方米，假設每單位時間有 40 立方米的海水流入槽中，並均勻混合。海水中每立方米含鹽量為 $(1+\cos t)$ 公克，而槽中水溶液的流出率為每單位時間 40 立方米，試問槽中水溶液在任意 t 時間的含鹽量 $y(t)$ 為何？【93 成大機械所 20%】
3. The mixing of the two salt solutions of differing concentrations gives rise to a first-order differential equation for the amount of salt contained in the mixture. Let us suppose that a large mixing tank holds 300 gallons of water in which salt has been dissolved. Another brine solutions is pumped into the large tank at a rate of 3 ga/min, and then when the solution is well stirred it is pumped out at the same rate.
 - (a) If the concentration of the solution entering is 2 lb/ga, determine a model for the amount of the salt in the tank at any time.
 - (b) If 60 pounds of salts was dissolved in the initial 300 gallons, how much salt would be in the tank after a long time? 【89 台大電機所 13%】
4. 一水槽中裝有 200 公升含鹽之水溶液，鹽之濃度為 1.0 克/公升，現以每分鐘 2 公升之速率加入清水，同時水槽亦以同樣之速率排水，假設在加水及排水的過程中水溶液皆均勻攪拌，請問使水溶液鹽之濃度成為原來的 1% 所需時間？【87 中央土木所 10%】
5. A 400 gallons tank initially is half full of a fluid in which there is 50 gm of salt are dissolved. A mixture consisting of 2 gm of salt per gallon is flowing into the tank at a rate of 10 gallons per minute. Meanwhile, the brine is being drawn off simultaneously at the rate of 4 gallons per minute. Will the amount of the salt in the tank reach 600 gm before the tank is filled? 【88 雲科電機所 20%】
6. A 500-gallon tank initially contains 100 gallons of brine in which 5 pounds of salt have been dissolved. Brine containing 2 pounds per gallon is added at the rate of 5 gallons per minute, and the mixture is poured out of the tank at the rate of 3 gallons per minute. Determine how much salt is in the tank at the moment it overflows.【88 台大化工所 10%】
